SUMO GLOVE

Reducing injury, reducing damage to pallets, racking, products.....

Made of an industrial grade polyurethane, the SUMO Glove is bonded to the tips of forks and replaces the hard steel with a material that has a unique cushioning effect, designed to greatly reduce product, pallet and racking damage while enhancing safety without affecting the operational effectiveness of the truck.

Environment Agency figures show that last year a reported 670,000 metric tonnes of wooden pallets and crates went to Landfill sites in the UK alone. The figure represents some 23 million pallets broken beyond repair. The SUMO Glove has shown how it can drastically reduce landfill requirements by increasing the lifespan of warehouse pallets.

The SUMO Glove:

- Protects: products, staff, pallets, racking, fixtures
- Dramatically reduces product damage
- Increases lifespan of pallets
- Cost effective warehouse protection
- Decreases insurance claims
- Please note Sumo adds approximately 30 mm to blade length.
