ADJUSTABLE CRANE HOOKS

BFS crane hooks effectively transform a forklift into a mobile crane, handle awkward loads which cannot be safely handled by a conventional forklift with great efficiency. They have excellent strength:weight ratios. All crane hooks are supplied complete with safety swivel hook and shackle.

Its position along the forks can be easily adjusted, but not to be used on the taper.

“PB” denotes plain bearing hook

“BB” denotes ball bearing hook (for easier load rotation)

A simple low cost means of “craning” loads. Clamps directly onto parallel section of fork blades.
